

Mass Communication Resources

Our Technology Allows Your Business to Efficiently Communicate to a Huge Group of Employees or Customers Simultaneously

Large Capacity Phone Check In Line

A dedicated phone number can be called by thousands of simultaneous callers. The caller receives a recorded message that identifies, or states circumstances important to the caller. For example, a weather line to make sure the company or plant location is open. There are many applications this program can address for your employees and customers.

Voice Broadcast Feature

An outbound recorded call that goes to a list of employees or customers identifying a circumstance or condition they need to know about. Can be combined with Phone Check-In Line and the Text Broadcast feature. It allows you to contact people via phone, then they all get the same coordinated message spoken to them. Will leave a voice mail for locations that do not answer live. Can be professionally recorded for an additional fee.

Text Broadcast Feature

This feature can work in tandem with the Voice Broadcast Feature or Large Capacity Phone Check In Line or it can work on its own. Text a team, group, shift, plant, or entire company, the same coordinated message instantly.
