

Our Technology Allows Your Business to Efficiently Communicate to a Huge Group of Employees / Customers Simultaneously

### CHECK-IN LINE

A dedicated phone number can be called by thousands of simultaneous callers. The caller receives a recorded message that identifies, or states circumstances important to the caller. For example, a weather line to make sure the company or plant location is open. There are many applications this program can address for your employees and customers.

### VOICE BROADCASTING

An outbound recorded call that goes to a list of employees or customers identifying a circumstance or condition they need to know about. Can be combined with Check-In Line and the Text Broadcasting. It allows you to contact people via phone, then they all get the same coordinated message spoken to them. It will leave a voice mail for locations that do not answer live. Can be professionally recorded for an additional fee.

### TEXT BROADCASTING

This feature can work in tandem with the Voice Broadcasting or Check In Line or it can work on its own. Text a team, group, shift, plant, or entire company, the same coordinated message instantly.
